N-IUSSP | May 16, 2021

Proportion of all people age 100 years and older living there in 2015. This map is a cartogram where the original shapes of each territory mapped is proportional to the variable mapped.

Source: <https://worldmapper.org> based on United Nations, Department of Economic and Social Affairs, Population Division (2017). World Population Prospects: The 2017 Revision, DVD Edition. (last accessed March 2018).

In 2015 there were about 417,000 individuals aged 100 and over worldwide more than four times as many as in 1990, according to United Nations estimates. This figure is expected to increase to 3.7 million centenarians across the globe in 2050. China is expected to have the largest centenarian population, followed by Japan, the U.S., Italy and India.
